CAREER OBJECTIVE

Computer Science undergraduate (2028) seeking a **Software Development** or **Full-Stack Internship**. Experienced in building and deploying production MERN applications with expertise in REST APIs, real-time systems, and Generative AI integration. Actively expanding into GenAI engineering.

EDUCATION

Pranveer Singh Institute of Technology (PSIT)			2024 – 2028
B.Tech in Computer Science and Engineering			CGPA: 8.25
William Henry Smith Memorial School	2024	ISC (Class XII)	90.00%
William Henry Smith Memorial School	2022	ICSE (Class X)	92.67%

TECHNICAL SKILLS

Languages	JavaScript, Python, Java
Frontend	React.js, HTML5, CSS3
Backend	Node.js, Express.js
AI Integration	Groq API, Gemini API, Prompt Engineering, Structured JSON Output
Databases	MongoDB, Mongoose
Real-Time	Socket.IO, WebRTC
Auth & Tools	JWT, bcrypt, Nodemailer, Git, GitHub, Postman, Vercel
Core CS	Data Structures & Algorithms, OOP, DBMS, Operating Systems

PROJECTS

SchemaForge – AI Database & Backend Generator Live Demo — GitHub

Stack: React.js, Node.js, Express.js, Groq API, Gemini API, Mermaid.js, JSZip, Vercel

- Built a **3-layer AI pipeline** (Groq Validator → Gemini Enhancer → Groq Structured Generator) that transforms plain-English app descriptions into normalized database schemas using structured JSON output with strict validation.
- Generated complete backend scaffolding from a single prompt — **Mongoose models, Express routes, CRUD controllers, and SQL schema** — with one-click ZIP download organized into a production-ready folder structure.
- Implemented prompt validation and AI-powered enhancement layer to improve schema accuracy and handle vague or ambiguous inputs gracefully before generation.

FitBalance AI – Smart Fitness Tracker

Live Demo — GitHub

Stack: React.js, Node.js, Express.js, MongoDB, Gemini API, JWT, Vercel

- Architected a full-stack fitness platform with MongoDB schema supporting calorie logging, workout tracking, BMI analytics, and personalized dashboards — secured with JWT and cookie-based session management.
- Integrated **Gemini API** to deliver context-aware health and nutrition recommendations based on each user's logged data, with complete auth flow — email verification, password reset, and protected route middleware.
- Deployed on **Vercel** with MongoDB Atlas cloud database and full frontend-backend integration via Axios.

ChatApp – Real-Time Messaging & Video Calling

Live Demo — GitHub

Stack: React.js, Node.js, Express.js, MongoDB, Socket.IO, WebRTC, Vercel

- Built a real-time platform supporting one-to-one messaging, password-protected group rooms, and live user presence — synchronized via **Socket.IO** WebSockets.
- Engineered peer-to-peer video calling using **WebRTC** with a custom signaling server (offer/answer/ICE candidate exchange), delivering low-latency audio/video without third-party media services.

ACHIEVEMENTS

- Solved **250+ LeetCode problems** in Java with consistent focus on arrays, trees, and dynamic programming.
- Built and deployed **3 production applications** featuring AI integration, real-time communication, and automated backend code generation.
- Maintained **CGPA of 8.25** while independently designing and shipping full-stack projects outside coursework.
